Timber pent shelter

A simple place to pause

A contemporary timber shelter with a clean pent roof and a long built-in bench. Solid sides and a slatted rear feature create a welcoming rest point beside a tee or between holes. The open front gives golfers easy access and a clear view of play.

Designed to suit your course

Choose the footprint, timber finish and seating layout to suit your preferred location. We can incorporate club branding, hole information and optional lighting, with the amount of screening tailored to the outlook and exposure of the site.

Traditional timber pavilion

A familiar pavilion style

A pitched pavilion roof and exposed timber framing give this shelter a traditional appearance. Seating follows the inside perimeter, leaving the entrance and central floor open. This layout offers a comfortable place for golfers to rest while keeping bags and movement clear of the seating.

Shelter with an open outlook

A solid rear wall and partial side screens offer a choice of enclosure. Adjust the roof finish and screening to complement nearby course buildings. The shelter can include a club crest or tee information board, with its position planned around the route golfers take through the course.

Composite and timber shelter

A contemporary material mix

Grey composite cladding pairs with natural timber posts and a warm timber ceiling. The pent roof keeps the profile simple, with sheltered seating set against the rear wall. The contrast between grey cladding and timber provides an alternative to an all-timber building.

Your preferred specification

Select the cladding colour, bench finish and level of side enclosure. The final material choice will reflect your maintenance priorities and budget. We can discuss alternative finishes, optional lighting and signage, so the completed shelter fits both its setting and the way your club intends to use it.

Stone-base pavilion

Timber above natural stone

Stone dwarf walls give this pavilion a substantial base, while timber framing and a hipped roof maintain an open, welcoming feel. Corner seating makes good use of the sheltered space. The stone and timber combination suits a prominent tee or a landscaped rest area.

A finish that belongs on your course

Match the stone to local surroundings or existing clubhouse features. Roof coverings, timber treatments and club signage can form part of the bespoke specification. We can also adjust the wall height and seating arrangement to balance enclosure, views and ease of access.

Pent shelter with corner seating

More room to sit together

A wider pent canopy covers an L-shaped bench, creating a rest area for a group of golfers. Timber screening adds interest while retaining views across the course. The corner layout creates a sociable space for members and visitors, with an open central area for access and golf bags.

Flexible seating and screening

Choose plain timber benches or optional outdoor cushions. We can adjust side panels and the entrance to suit the position and the space available. Bench dimensions, screening and branding can all form part of your specification, whether the shelter sits beside a tee or along a connecting path.

Stone-base pent shelter

A modern roof with a stone base

This design combines a single-slope pent roof with natural stone lower walls and timber framing above. Built-in corner seating leaves a clear front entrance. The lower roof profile offers a contemporary alternative to a pitched pavilion, while the stonework ties the design into a traditional course setting.

Tailored to its setting

Select matching stonework, timber cladding and the amount of enclosure. Optional lighting and a club or sponsor plaque can add the finishing details. We can discuss matching the stone to existing walls and adjusting the footprint to suit the available space and the access route.

Large octagonal shelter

A larger shared rest area

An eight-sided pavilion creates a distinctive gathering point on the course. Wraparound seating follows the perimeter, with stone lower walls and an open entrance. Its larger footprint offers more room for groups to pause together while retaining a clear central area and views across the course.

A bespoke pavilion for your club

We can develop the size and seating capacity around your requirements. Choose the roof finish, rear panels and branding to complement your course. We can explore different levels of enclosure, matching stonework and optional lighting to create a pavilion suited to your chosen location.

Seating and starter shelter options

Seating around the course

Straight benches, corner layouts and octagonal seating can create useful rest points. Choose standalone seating or integrate it into a covered shelter. Tailor bench sizes and finishes to individual tees or gathering areas for a consistent appearance across the course.

Starter and tee information

Combine a shelter with club signage, tee information or a starter station. We can tailor the layout to the way your club welcomes and directs golfers. Options include a starter counter, sheltered seating and space for notices, with the access and outlook planned around the tee.

A shelter designed around your club

Club identity and sponsorship

Club crests, hole information and discreet sponsor panels can form part of the design. Sponsorship may help your club offset the project cost, subject to securing a suitable local partner. A dedicated panel can give a sponsor a visible presence while keeping the overall design in line with your club branding.

A bespoke proposal

Share your preferred design, proposed location and approximate size. We can discuss materials, seating and access before preparing a tailored quotation. Your proposal can include the agreed design and options, alongside site preparation and installation requirements.
