Covered practice, designed around your club

A flexible specification

Your specification can include bay dividers, lighting, club branding and secure equipment storage. Optional heating and ball-tracking equipment allow you to develop the facility around your priorities. We agree access, materials and the installation scope with you, so the quotation clearly sets out what your package includes.

A sheltered place to practise

Create a sheltered setting for warm-ups, coaching and regular practice. We tailor the bay count and layout to your available space, with finishes that complement your course. The aim is to give members and visitors a more comfortable place to practise throughout the golfing season.

The practice shelter: two bays

Planned for everyday use

We plan the layout around comfortable swing space, durable surfaces and clear access routes. Rear entrances can allow golfers to enter without crossing the open hitting frontage. Lighting, storage and equipment positions form part of the design discussion, with the final arrangement agreed following a site assessment.

A compact starting point

Two generous practice bays provide a compact starting point for clubs with a smaller practice area. The pent roof and timber finish give the shelter a clean, understated appearance. Use the bays for member practice, pre-round warm-ups or coaching, with optional equipment to suit your intended use.

The practice shelter: three bays

Optional ball-tracking technology

We can design the building around equipment from your chosen ball-tracking supplier, including provision for screens, power and connectivity. Technology can support practice sessions, coaching and interactive play. Hardware, installation requirements and ongoing service terms need supplier confirmation and a separate specification before we finalise the building layout.

Individual access to each bay

Three wide bays provide separate practice spaces, each with its own rear entrance. The illustrated layout places a screen on the back wall beside each door. Internal dividers define the bays, while end walls add shelter. We agree mat positions and circulation space around the chosen equipment.

The traditional range: two bays

Two bays, two rear entrances

Each bay has a separate rear doorway, with space beside it for an optional practice screen. This arrangement provides individual access and keeps the front available for hitting out onto the range. We plan golf bag storage, ball baskets and other equipment around the agreed swing and circulation areas.

Apex roof and exposed timber

The pitched roof, exposed timber frame and solid end walls give this two-bay design a traditional appearance. A squared internal divider separates the practice spaces, while club signage personalises the frontage. Timber finishes, roofing and lighting can complement nearby clubhouse buildings and the character of your course.

The traditional range: three bays

Finishes to suit your club

Choose timber finishes, roof coverings and lighting that suit your club's setting. Club branding and sponsor signage can form part of the design, alongside agreed storage or technology provision. We confirm the selected materials, accessories and installation work in your quotation, with optional items clearly identified.

More capacity in the same style

Three covered bays offer additional capacity for member practice, lessons or booked sessions, where your operating model allows. The apex design retains individual rear access and two squared internal dividers. We can also develop larger layouts, with bay numbers and the overall footprint tailored to your site and budget.

Potential income from your practice facilities

Sponsorship opportunities

Individual bay sponsorship or a sign on the building can give local businesses a visible presence at your club. Packages could combine signage with practice sessions or club promotions. Agree the price, term and benefits with each sponsor. Income depends on securing partners and maintaining those relationships.

Practice and coaching

Depending on your operating model, the facility could support range ball sales, paid practice sessions, professional lessons and club fitting. Technology-equipped bays may offer further booking options. We encourage clubs to assess likely usage, staffing, equipment charges and running costs when deciding which activities to offer.

A proposal for your club

Building and installation

Your quotation can cover the building, foundations, finishes, lighting and agreed accessories. We review site access, available services and the proposed layout before confirming the scope. Equipment supply and specialist installations are agreed separately where required, giving your club a clear view of the overall project.

Andrew Hargreaves

Send location photographs, available space, preferred bay count and budget. Details of nearby services and intended use help us prepare a suitable design and bespoke quotation.
